HARDWARE HIGHLIGHTS

Sturdy Keyed Handle Set features an integral keyed lock for your convenience. This die-cast zinc handle is finished with either a white powder coat finish or a forged finish of polished brass or satin nickel. Special protectants prevent the handles from scratching and corroding, even in harsh weather.

Mortised Multi-Point Lock is tamper-proof and has an anti-slam device that prevents the locking hooks from engaging when the door is open.

Stainless Steel, Sealed Ball Bearing Roller System is adjustable for flawless operation. These self-leveling tandem rollers require 30% less operating force than standard roller systems. This whisper-quiet system never needs cleaning or lubrication.

Optional Secondary Toe Lock

provides additional security when engaged. This lock can be installed as a secondary security lock to lock the door in the fully closed position, or as a vent lock, to allow the door to be locked partially open for fresh air flow.
